

# QuoteCat

## Complete Feature Reference

Mobile app · Web portal · v1.2.6

---

*Every tier claim verified against source code — citations inline*

Generated 2026-06-05 · [quotecat.ai](https://quotecat.ai)

**Verified against v1.2.6 codebase on 2026-06-05.** Every tier claim in this document was confirmed by reading the source. When this doc disagrees with marketing copy or older docs, this doc is authoritative — the gating lines are cited inline.

## What QuoteCat is

QuoteCat is a quoting, invoicing, and contract platform for contractors and small trade businesses. It ships in three pieces:

- **Mobile app** ( `quotecat/` ) — React Native / Expo, iOS + Android. The primary work surface for every contractor regardless of tier.
- **Web portal** ( `quotecat-portal/` , served at `portal.quotecat.ai` ) — Next.js 16. The contractor's logged-in web workspace. **Premium only**. The same codebase also serves client-facing document URLs ( `/q/[id]` , `/c/[id]` , `/pay/[id]` ) — these are generated and sent by **Pro+ contractors** to their clients for online approvals, signatures, and payments. Free contractors can only share PDFs. A separate client magic-link login at `/client/*` lets clients of Pro+ contractors aggregate documents from one or more contractors.
- **Shared backend** — Supabase (Postgres + Auth + Edge Functions), Stripe (subscription billing + Connect for client payments), Twilio (SMS), Anthropic Claude (Drew AI), OpenAI embeddings, X-Byte (supplier pricing — currently paused).

## Subscription tiers

Three tiers. Tier is stored on the Supabase `profiles.tier` column as lowercase strings `"free"` | `"pro"` | `"premium"` . The mobile app keeps a local mirror in `UserState.tier` ( `lib/user.ts:7` ).

| Tier    | Founder price | Regular price | Founder cap        |
|---------|---------------|---------------|--------------------|
| Free    | \$0           | \$0           | —                  |
| Pro     | \$29/mo       | \$49/mo       | First 50 customers |
| Premium | \$79/mo       | \$109/mo      | First 25 customers |

Founder pricing is locked forever for early adopters.

### Free tier monthly limits

From `FREE_LIMITS` in `lib/user.ts:23` :

| Resource                  | Limit                                      |
|---------------------------|--------------------------------------------|
| Quote creations           | 10 / month                                 |
| PDF exports               | 10 / month                                 |
| Spreadsheet (CSV) exports | 10 / month                                 |
| Invoice PDF exports       | 10 / month (always with QuoteCat branding) |
| Pricebook items           | 50 total (not monthly — total)             |

Counters reset on the 1st of each month.

## Apple compliance

The mobile app has no in-app pricing UI and no in-app purchase flow. Free users tap “Upgrade” and are routed to [quotecat.ai](https://quotecat.ai) in the system browser where they buy via Stripe. RevenueCat is used only to read subscription status after the web purchase completes.

## Mobile app features

### Authentication

- Email + password (Supabase Auth)
- Apple Sign-In (iOS) — `usesAppleSignIn: true` in `app.json`
- Google Sign-In (iOS + Android)
- Biometric login (Face ID / Touch ID) for returning users
- Password recovery via email magic link

All sign-in methods are available to all tiers.

### Dashboard ( `app/(main)/(tabs)/dashboard.tsx` )

| Surface                                                                       | Tier    | Notes                                                                        |
|-------------------------------------------------------------------------------|---------|------------------------------------------------------------------------------|
| Quote stats: total / draft / sent / approved / to-invoice / follow-ups        | Free    |                                                                              |
| <b>Business value tracking</b> (sent value, approved value, to-invoice value) | Pro+    | <code>canAccessValueTracking()</code> — <code>lib/features.ts:167</code>     |
| <b>Average profit margin card</b> (from paid invoices)                        | Pro+    | Requires <code>showMargin</code> preference + default labor rates configured |
| Recent quotes / recent invoices                                               | Free    | Free users see all their own quotes/ invoices                                |
| <b>Recent contracts</b>                                                       | Premium | <code>isPremium &amp;&amp; preferences.showRecentContracts</code>            |
| <b>Cloud sync indicator</b> + last sync time                                  | Pro+    | Renders only when sync is available                                          |
| Change order count badges on approved quotes                                  | Pro+    |                                                                              |
| First-run onboarding flow                                                     | Free    | Sets target margin + business defaults                                       |
| Section show/hide toggles                                                     | Free    | Every card on the dashboard can be dismissed                                 |

## Quotes

Quote creation + editing ( `app/(forms)/quote/[id]/edit.tsx` ):

| Capability                                                                                                         | Tier                              | Gating                                                                      |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------------|-----------------------------------------------------------------------------|
| Create a quote                                                                                                     | Free (10/mo cap) / Pro+ unlimited | <code>canCreateQuote()</code> — <code>lib/features.ts:10</code>             |
| Edit name, client (name/email/phone/address), notes, follow-up date                                                | Free                              |                                                                             |
| Add materials from catalog or pricebook                                                                            | Free                              |                                                                             |
| <b>Quick custom items</b> (inline add: name + price, amber-tinted background)                                      | Free                              | Build #141. No catalog ID required.                                         |
| Adjust quantity with stepper, swipe to delete/edit, undo via snackbar                                              | Free                              |                                                                             |
| Labor: simple flat cost + cost rate                                                                                | Free                              |                                                                             |
| <b>Labor: per-worker team mode</b> (assign specific team members to labor lines)                                   | Premium                           | <code>canAccessMultiWorkerLabor()</code> — <code>lib/features.ts:152</code> |
| Markup % and tax %                                                                                                 | Free                              |                                                                             |
| Status workflow: draft → sent → approved → completed → archived (+ declined)                                       | Free                              |                                                                             |
| Pin to top, follow-up reminders, duplicate as template                                                             | Free                              |                                                                             |
| <b>Materials margin indicator</b> on quote edit (color-coded if <code>targetMaterialsMarginPercent &gt; 0</code> ) | Free                              | No tier gate. <code>edit.tsx:1603</code> . Became Free in v1.2.5.           |
| <b>Multi-tier pricing</b> (Good/Better/Best bundles) — linked quotes via <code>tierGroupId</code>                  | Free                              | Create tier modal at edit; when one is approved, others auto-archive        |
| <b>Change order tracking</b> (history of edits to approved quotes)                                                 | Pro+                              | <code>canAccessChangeOrders()</code> — <code>lib/features.ts:102</code>     |
| Auto-save on blur, client autocomplete from saved clients                                                          | Free                              |                                                                             |

**Quotes list** (`app/(main)/(tabs)/quotes.tsx`):

Search, filter (8 status filters), sort by date / amount / name / client / follow-up date, multi-select for bulk actions (delete, archive, status change), swipe actions, pull-to-refresh triggers cloud sync (Pro+).

**Quote review + export** (`app/(forms)/quote/[id]/review.tsx`):

| Capability                                                                                                     | Tier                                                                  | Gating                                                                                                       |
|----------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Full preview with materials, labor, tax, totals                                                                | Free                                                                  |                                                                                                              |
| Export PDF                                                                                                     | Free (10/mo cap, QuoteCat branding) / Pro+ unlimited, custom branding | <code>canExportPDF()</code> — <code>lib/features.ts:31</code>                                                |
| Export CSV spreadsheet                                                                                         | Free (10/mo) / Pro+ unlimited                                         | <code>canExportSpreadsheet()</code> — <code>lib/features.ts:56</code>                                        |
| <b>Share as Link</b> (sends client a <code>portal.quotecat.ai/q/[id]</code> URL for online viewing + approval) | Pro+                                                                  | <code>review.tsx:508</code> — <code>if (isPro    isPremium) . Quote auto-syncs to cloud before share.</code> |
| <b>Export all tiers as single PDF</b> (bundles)                                                                | Free (counts against PDF quota)                                       |                                                                                                              |
| Create invoice from this quote                                                                                 | Free                                                                  | Eligible from approved or completed quotes                                                                   |
| Create contract from this quote                                                                                | Premium                                                               |                                                                                                              |
| Change orders section on approved/completed quotes                                                             | Pro+                                                                  |                                                                                                              |
| Company logo + terms appear on PDF if configured                                                               | Free                                                                  |                                                                                                              |

## Invoices ( `app/(main)/(tabs)/invoices.tsx` )

| Capability                                                                                            | Tier                                                                                  | Gating                                                                 |
|-------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| Create / view / manage invoices                                                                       | Free                                                                                  | All tiers have invoice access — <code>lib/features.ts:109</code>       |
| Status workflow: unpaid / partial / paid / overdue                                                    | Free                                                                                  |                                                                        |
| Create from quote (approved or completed)                                                             | Free                                                                                  |                                                                        |
| <b>Create from contract</b>                                                                           | Premium                                                                               | Contract picker only renders for Premium                               |
| Auto invoice numbering, due dates, partial payment tracking                                           | Free                                                                                  |                                                                        |
| Export PDF                                                                                            | Free (10/mo cap, <b>always with QuoteCat branding</b> ) / Pro+ unlimited, no branding | <code>canExportInvoice()</code> — <code>lib/features.ts:117</code>     |
| <b>Share as Link</b> (sends client a <code>portal.quotecat.ai/pay/[id]</code> URL for online payment) | Pro+                                                                                  | <code>invoice/[id].tsx:303, 2020</code> — share menu disabled for Free |
| <b>Send payment reminder</b> to client (SMS or email channel)                                         | Pro+                                                                                  | <code>sendInvoiceReminder()</code> — <code>lib/invoices.ts:554</code>  |

## Contracts ( `app/(main)/(tabs)/contracts.tsx` )

**Premium-only.** Free and Pro users see a locked state with an upsell to upgrade. Gating:

`isPremium = effectiveTier === "premium" (contracts.tsx:41).`

- Create contract from approved quote
- Full contract template editing
- Send to client for e-signature (signing happens via web portal)
- Track sent / viewed / signed / completed status
- PDF export

## Pricebook ( `app/(main)/price-book.tsx` )

| Capability                                | Tier                                       | Gating                                       |
|-------------------------------------------|--------------------------------------------|----------------------------------------------|
| Create, edit, delete custom pricing items | Free (50 items total cap) / Pro+ unlimited | <code>FREE_LIMITS.pricebookItems = 50</code> |
| Search and filter by category             | Free                                       |                                              |
| Use items in quotes and assemblies        | Free                                       |                                              |
| Cloud sync of pricebook                   | Pro+                                       | Auto-syncs on save for Pro+                  |

## Assemblies — Pro+

Assemblies are reusable templates for common jobs (e.g., “frame a room”) that bundle multiple products with fixed or computed quantities. Pro+ via `canAccessAssemblies()` ( `lib/features.ts:81` ).

| Screen                                | Purpose                                                                    |
|---------------------------------------|----------------------------------------------------------------------------|
| <code>assemblies.tsx</code> (tab)     | Browse “My Assemblies” + “Community” tabs, add to a quote                  |
| <code>assemblies-browse.tsx</code>    | List user’s custom assemblies with search                                  |
| <code>assembly-manager.tsx</code>     | Create / edit / delete custom assemblies                                   |
| <code>assembly-editor/[id].tsx</code> | Edit assembly items + computed quantities                                  |
| <code>copy-assembly/[id].tsx</code>   | Duplicate an assembly template                                             |
| <code>community-assemblies.tsx</code> | Browse shared assemblies (trade-filtered, sortable), vote, copy to library |

## Drew — AI assistant ( `app/(main)/wizard.tsx` )

Drew runs as a Supabase Edge Function ( `drew-agent` ) calling Claude Sonnet 4 with prompt caching enabled.

| Mode                                                                                                                                    | Tier      | Gating                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------------------------------------------------|
| <b>Build a quote with Drew</b> (full conversational quote-building flow with material checklists, product selection, labor entry, save) | Premium   | <code>canAccessWizard()</code> — <code>lib/features.ts:145</code>      |
| <b>Ask Drew a question</b> (general quoting / pricing / construction advice)                                                            | All tiers | <code>canAccessDrewSupport()</code> — <code>lib/features.ts:160</code> |

Free and Pro users see a single “Ask Drew” entry. Premium users see a two-button intro (Build Quote vs Ask Drew).

## Toolbox ( `app/(main)/(tabs)/pro-tools.tsx` )

The Toolbox tab is the central hub for all calculators and tools. Each tile shows a locked state for tiers that can’t access it.

**Free tools** (all tiers):

| Tool                                | File                                                 |
|-------------------------------------|------------------------------------------------------|
| Labor Rate Calculator               | <code>app/(main)/labor-rate-calculator.tsx</code>    |
| Overhead Calculator (8-step wizard) | <code>app/(main)/overhead-calculator.tsx</code>      |
| Markup Calculator                   | <code>app/(main)/markup-calculator.tsx</code>        |
| Profit Margin Calculator            | <code>app/(main)/profit-margin-calculator.tsx</code> |
| Client Manager (CRM-style)          | <code>app/(main)/client-manager.tsx</code>           |
| Price Book (50-item cap on Free)    | <code>app/(main)/price-book.tsx</code>               |

### Pro tools (Pro+):

| Tool                                                                                                                                                          | File                                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| <b>Pricing Health Check</b> — audits last 90 days of quotes vs target margin, shows estimated lost profit, flags underpriced quotes (v1.2.6 headline feature) | <code>app/(main)/pricing-health-check.tsx</code> |
| Assembly Manager                                                                                                                                              | <code>app/(main)/assembly-manager.tsx</code>     |
| Assembly Library                                                                                                                                              | <code>app/(main)/assemblies-browse.tsx</code>    |
| Job Calculator (compute material quantities from job dimensions)                                                                                              | <code>app/(main)/job-calculator.tsx</code>       |

### Premium tools (Premium):

| Tool                                                 | File                                         |
|------------------------------------------------------|----------------------------------------------|
| Team Members                                         | <code>app/(main)/team-members.tsx</code>     |
| Contracts                                            | <code>app/(main)/(tabs)/contracts.tsx</code> |
| Premium Portal link (deep-links into the web portal) | —                                            |

### Team Members (Premium)

`app/(main)/team-members.tsx`. Manage workers with billable rate + cost rate per person. Used by per-worker labor mode on quote edit. Syncs to Supabase so the web portal can assign jobs to these workers.

### Change Orders (Pro+)

| Screen                                              | Purpose                                                       |
|-----------------------------------------------------|---------------------------------------------------------------|
| <code>app/(main)/change-orders/[quoteId].tsx</code> | List all change orders for a quote                            |
| <code>app/(main)/change-order/[id].tsx</code>       | Diff view: items added/removed/modified, labor, markup, total |

Surfaces on approved quotes via dashboard + quote edit + quote review.

**Known limitation:** Change orders persist locally (AsyncStorage / SQLite) but **do not yet sync to Supabase**, so they are not visible in the web portal. Plan: [docs/CHANGE-ORDERS-SYNC-PLAN.md](#) .

## Settings ( [app/\(main\)/settings.tsx](#) )

- Profile (email, tier badge)
- **Manage Account** → opens Stripe subscription portal (Pro+ only)
- **Delete Account** (all tiers)
- Pricing defaults: markup %, labor rate, labor cost rate, target margin, materials margin target
- Theme (light / dark / auto)
- Dashboard customization (show/hide each card)
- Business Settings (company name, phone, email, address, logo, website, payment methods listed for invoices)
- Price Book link
- **Cloud Sync** panel (Pro+): status, last sync time, manual sync button with cooldown, sync counts per data type
- Privacy policy + terms links
- Restore Purchases (subscription recovery)
- Sign Out (resets local user state, clears analytics identity)

## Cloud Sync (Pro+)

Pro and Premium users get bi-directional sync between the local device store and Supabase. Synced data: quotes, invoices, clients, pricebook items, team members, business settings, assemblies. Free users stay 100% local — their data never touches Supabase.

Sync triggers: pull-to-refresh on dashboard / quotes / invoices, manual sync button in Settings, post-sign-in.

## Onboarding

First-run users see an onboarding flow that captures business defaults and sets a target margin. Resumable from the notifications area.

---

## The contractor portal — [portal.quotecat.ai](#) (Premium only)

The **portal** is the contractor's web workspace at [portal.quotecat.ai](#) . Logging into the portal — at all — requires Premium. Pro and Free contractors work entirely on mobile; the portal is not part of their plan.

Gating: the [/dashboard/\\*](#) layout enforces `profile.tier === 'premium'` ( [dashboard/layout.tsx:50](#) ). Every contractor route lives under [/dashboard/\\*](#) .

## Portal routes (all Premium)

| Route                                                                      | Purpose                                                                                                                                             |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>/dashboard</code>                                                    | KPI overview: revenue MTD, outstanding, overdue, pending, needs-attention, recent activity, profitability widget                                    |
| <code>/dashboard/quotes</code> + <code>/[id]</code> + <code>/new</code>    | Full quote management on the web — line items, labor, materials, tax, markup, pricebook + team member integration                                   |
| <code>/dashboard/invoices</code> + <code>/[id]</code> + <code>/new</code>  | Invoices list + detail. Detail page includes SMS reminder button and QuickBooks sync button (if connected).                                         |
| <code>/dashboard/contracts</code> + <code>/[id]</code> + <code>/new</code> | Contract list / detail / creation                                                                                                                   |
| <code>/dashboard/clients</code> + <code>/new</code>                        | CRM-style client database                                                                                                                           |
| <code>/dashboard/jobs</code> + <code>/new</code>                           | Job management: scheduled / in-progress / completed                                                                                                 |
| <code>/dashboard/team</code>                                               | Two tabs — Workers (manage team, assign jobs via SMS magic link) and Techs (invite secondary users to the contractor account with permission flags) |
| <code>/dashboard/messages</code> + <code>/new</code>                       | Client messaging across web + SMS channels                                                                                                          |
| <code>/dashboard/pricebook</code>                                          | Custom pricebook with CSV import/export                                                                                                             |
| <code>/dashboard/profitability</code>                                      | Labor rate + overhead wizard, calculates real margin                                                                                                |
| <code>/dashboard/analytics</code>                                          | Revenue trend, conversion funnel, deal size, close time, win rate, collection rate                                                                  |
| <code>/dashboard/settings</code>                                           | Profile, branding, billing tier, Stripe Connect setup, SMS settings, worker verification toggle                                                     |

## Premium-only portal capabilities (verified in API + UI)

| Feature                                                                                                                    | Where                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Two-way SMS via Twilio</b> — provision dedicated number, send to clients + workers, receive via webhook, voice handling | <code>/api/twilio/*</code>                                                                                                         |
| <b>QuickBooks Online sync</b> — OAuth, push invoices, auto-create QB customers, single-invoice or bulk sync                | <code>/api/quickbooks/*</code>                                                                                                     |
| <b>Team management</b> — workers (with magic-link assignment) + techs (secondary user accounts with permission flags)      | <code>/dashboard/team</code> + <code>/api/team-members</code> , <code>/api/job-assignments</code> , <code>/api/team/techs/*</code> |
| <b>Stripe Connect</b> — accept client payments directly, dashboard link to Express account                                 | <code>/api/stripe/connect</code>                                                                                                   |
| <b>Invoice SMS reminders</b>                                                                                               | <code>/api/invoices/[id]/send-reminder</code>                                                                                      |
| <b>Job notifications to client/worker</b>                                                                                  | <code>/api/jobs/[id]/notify-client</code> , <code>/api/job-assignments/notify</code>                                               |

## What's NOT in the portal yet

- **Change orders** — no routes, no API, no UI. Mobile-only feature for now. Sync plan documented in `docs/CHANGE-ORDERS-SYNC-PLAN.md`.
- **Scheduling calendar UI** — job assignments exist as records but no visual calendar
- **Workflow automation rules engine** — not built
- **DocuSign / Adobe Sign integration** — signatures are manual pad only
- **1099 / tax reports** — not built
- **Payroll integration** — not built

## Other web-served surfaces (not part of the portal)

These exist on the same Next.js codebase but are **not** the contractor portal. They serve clients and workers — no contractor login.

### Client-facing document URLs — Pro+ share targets

When a Pro or Premium contractor sends a quote or invoice to a client, the client opens one of these URLs in a browser. No client login needed — the document ID is the access token. **Free contractors cannot generate these links** and must share PDFs instead (mobile share sheet → email / SMS / any system share target). The “Share as Link” option in the mobile app is gated to Pro+ at `review.tsx:508` and `invoice/[id].tsx:303`.

| Route                          | Purpose                                                                                                                                                                          | Generated by                                    |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| <code>/q/[id]</code>           | Quote view. If quote is part of a tier group, shows Good/Better/Best comparison view.                                                                                            | Pro+ contractor (mobile “Share as Link”)        |
| <code>/c/[id]</code>           | Contract view + signature pad. Marks contract viewed on load. Client signs electronically.                                                                                       | Premium contractor (contracts are Premium-only) |
| <code>/pay/[id]</code>         | Invoice payment. If the contractor has Stripe Connect (Premium): Stripe checkout. Otherwise: shows configured alternative methods (Zelle, Venmo, Cash App, PayPal, check, wire). | Pro+ contractor (mobile “Share as Link”)        |
| <code>/pay/[id]/success</code> | Payment confirmation                                                                                                                                                             | —                                               |

### Client magic-link login at `/client/*` — Pro+

A separate flow where a client logs in once with a magic link and sees **all** documents (across history) from the contractors they’ve worked with. This is distinct from the per-document share URLs above — those are one-document-at-a-time URLs sent by the contractor. The client magic-link login is a client-controlled hub.

Code ( `/api/client-portal/request-link:76` ) allows clients of **Pro or Premium** contractors. Magic links expire after 15 minutes.

| Route                          | Purpose                                                                        |
|--------------------------------|--------------------------------------------------------------------------------|
| <code>/client/login</code>     | Client requests magic link (sent to email)                                     |
| <code>/client/verify</code>    | Magic link verification                                                        |
| <code>/client/dashboard</code> | Client hub: all quotes, invoices, contracts, jobs from one or more contractors |
| <code>/client/messages</code>  | Client-initiated messages with the contractor                                  |

### Worker magic link at `/worker/[token]`

When a Premium contractor assigns a worker to a job, the worker receives an SMS with a 30-day magic link. They don't need an account — they just open the link.

| Route                        | Purpose                                                                                                                   |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| <code>/worker/[token]</code> | 30-day expiring magic link. Shows job details, address, schedule. Worker submits updates + photos and changes job status. |
| <code>/my-jobs</code>        | Worker dashboard of all assigned jobs (session-authed via token)                                                          |

Worker assignment is part of the Premium-only Team Management feature, so workers only exist in the system when their contractor is Premium.

### Server-side surface (notable API routes, both portal and public-link)

- Quote PDF generation via Puppeteer + headless Chromium
- Tier-group PDFs for Good/Better/Best bundles
- Stripe webhooks for payment confirmation
- Twilio webhooks for incoming SMS + voice
- QuickBooks OAuth callback + token refresh
- Resend (transactional email)

### Mobile vs. portal — what the contractor does, where

“Portal” below means `portal.quotecat.ai` (the contractor's logged-in workspace, Premium only). The client-facing document URLs (`/q`, `/c`, `/pay`) are listed separately — they're not contractor portal access, they're share targets generated by Pro+ contractors.

| Capability                                         | Mobile            | Portal (portal.quotecat.ai, Premium) | Client share URLs (Pro+ contractors only)                                      |
|----------------------------------------------------|-------------------|--------------------------------------|--------------------------------------------------------------------------------|
| Create / edit quotes                               | All tiers         | ✓                                    | —                                                                              |

## Cross-cutting topics

### Data architecture

- Free users: 100% local. Quotes + clients in SQLite (migrated from AsyncStorage), preferences in AsyncStorage. Never touches Supabase.

- Pro+ users: local store + Supabase mirror. Auto-migration on first sign-in (one-way local → cloud). Conflict resolution is last-write-wins.

## Auth model

- **Mobile:** Supabase Auth (email/password, Apple ID, Google), plus biometric unlock for returning users
- **Portal contractor login** at `portal.quotecat.ai/login` : Premium only. Free + Pro contractors don't sign into the portal — they work on mobile.
- **Client magic-link login** at `/client/login` : 15-min expiry. Code allows clients of Pro and Premium contractors ( `request-link/route.ts:76` ).
- **Worker magic link via SMS:** 30-day expiry, issued by Premium contractors when assigning jobs.
- **Client-facing document URLs** ( `/q` , `/c` , `/pay` ): no client login at all — document ID is the access token. But **only Pro+ contractors can generate and send these links**. Free contractors share PDFs via the mobile share sheet instead.

## Payments

- Subscription billing (contractor pays QuoteCat): Stripe via the marketing site at `quotecat.ai` . No in-app pricing on mobile to avoid Apple's 30% commission.
- Client → contractor invoice payments (contractor gets paid by client): Stripe Connect on the portal — Premium contractors only.
- Alternative payment methods (Zelle, Venmo, Cash App, PayPal, check, wire) can be configured per-contractor and surface on the public `/pay/[id]` page.

## Analytics + crash reporting

- PostHog for product analytics, both mobile and marketing site. Identifies user via Supabase user ID after sign-in.
- Sentry for crash + error reporting on mobile.
- Marketing site analytics route through a reverse proxy at `/ingest/*` to bypass ad blockers ( `netlify.toml` ).

## Third-party integrations actively used

Supabase, Stripe (subscription + Connect), Anthropic Claude (Drew), OpenAI embeddings (Drew tradecraft search), Twilio (SMS, Premium only), QuickBooks Online (Premium only), Resend (email), Cloudinary (image storage), RevenueCat (subscription status), PostHog (analytics), Sentry (crash reporting), Apple + Google identity providers.

**Currently paused:** X-Byte supplier pricing API. The “Drew references supplier catalog” path is commented out in `supabase/functions/drew-agent/index.ts:547-568` . Drew still references the contractor's own pricebook.

---

## Founder pricing

Early adopters lock founder pricing for life:

- **Pro:** \$29/mo vs. \$49/mo regular (~40% off) — first 50 customers
- **Premium:** \$79/mo vs. \$109/mo regular (~28% off) — first 25 customers

Price increases trigger at customer-count milestones, not time-based deadlines.

## How QuoteCat compares

Verified against current QuoteCat shipping features only — competitor figures are public list pricing as of mid-2026.

| Capability                    | QuoteCat Premium                 | FieldPulse        | Jobber            |
|-------------------------------|----------------------------------|-------------------|-------------------|
| Monthly cost (5 users / flat) | \$79 (founder) / \$109 (regular) | \$600+ (per-user) | \$300+ (per-user) |
| AI quote building             | ✓ (Drew)                         | ×                 | ×                 |
| Pricing Health Check audit    | ✓                                | ×                 | ×                 |
| E-signatures                  | ✓                                | ✓                 | ✓                 |

| Custom pricebook + CSV import | ✓                                | ✓                 | ✓                 |
| Two-way SMS messaging         | ✓ (Twilio)                       | ✓                 | ✓                 |
| QuickBooks sync               | ✓                                | ✓                 | ✓                 |
| Mobile platforms              | iOS + Android                    | iOS + Android     | iOS + Android     |
| Worker magic-link portal      | ✓                                | —                 | —                 |
| Multi-tier bundle quotes      | ✓                                | —                 | —                 |
| Offline-first mobile          | ✓                                | partial           | partial           |
| Per-user pricing              | No (flat)                        | \$100/user        | \$50/user         |

**QuoteCat's positioning:** flat-rate pricing means adding team members doesn't increase the bill. The financial-intelligence layer (true overhead-loaded labor rates, target margin enforcement, the Pricing Health Check audit) is the moat — competitors stop at “we generated a quote,” QuoteCat tells you whether the quote is actually profitable.

## Getting started

1. Download QuoteCat from the App Store or Google Play
2. Create an account (email, Apple ID, or Google)
3. Run the onboarding flow — set company details, default markup, target margin
4. Create your first quote with the “+” button (or use Drew on Premium)
5. Send to client via email, text, or any system share target

6. Get paid when client accepts and pays

---
